## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Hadfield et al.

Hadfield et al (U.S. Patent 4,745,075) discloses particle reagents for performing latex agglutination assays. The particle reagent comprises two or more populations of insoluble colored particles, wherein the particles of each population are not of the same color (col. 2, lines 39-68, and col. 3, lines 19-56).

With respect to the “characteristic quantity” of the claimed beads, the instant specification discloses on page 4 that color is an example of a characteristic quantity of the claimed beads. The colors of the particles (i.e. beads) of Hadfield et al are thus considered a “characteristic quantity”.

With respect to claim 3, the limitation "wherein the plurality of locations are defined as locations in a closest packing structure" is considered to be an intended use and thus is not accorded any patentable weight.
